AMENDMENTS TO THE SPECIFICATION:

Please amend paragraph [0290] as follows:

If it is determined that an order from the player is inputted, the CPU 1501 carries out a bill dispensing process (step S124) and a coin dispensing process (step S125). Namely, according to the input signal, the CPU 1501 transmits a control signal so as to actuate the bill processor 1511 and/or coin processor [[1512]] 1521, so as to carry out a process of dispensing a predetermined number of bills from the bill stacker 1513 to the bill payout opening 1057 and a process of dispensing a predetermined number of coins from the coin container 1520 to the coin payout opening 1058.

Please amend paragraph [0305] as follows:

In the upper part of the front face of a housing 1061 of the card issuing machine 1006, three kinds of prepaid cards <u>1062</u> are displayed as samples. Namely, 2000-, 3000-, and 5000-yen prepaid cards are successively displayed from the left. An input device 1651 (Fig. 18) constituted by three buttons <u>1065</u> is disposed therebelow. The three buttons <u>1065</u> correspond to the respective kinds of prepaid cards. By pressing one of the three buttons,

S/N: 10/790,097 10/22/2007 Docket No.: KAW-316-USAP the player can purchase a desirable kind of prepaid card.

Please amend paragraph [0306] as follows:

Disposed below the input device 1651 (buttons 1065, Fig. 17) is a display device 1650. Also provided is a bill insertion slot 1066 into which 1000-, 5000-, and 10000-yen bills can be inserted. Further, a bill payout opening 1067 for dispensing bills and a card issuing opening 1068 for issuing cards are provided therebelow.
